REGARDING BIOCOMPLEX W, BIOLOGICAL AGENT FOR WHASHING STREETS AND BINDING POWDER PARTICLES IN THE OPEN

We use BIOCOMPLEX W for regular washing of streets with washing vehicles. During the process there is no lifting up of the dust under its brushes and the washing truck sucks up much more dust. The layer of tire trace was successfully washed off and after one week traces of motor oil were removed from the asphalt. The concrete and asphalt area near the market place were washed from organic leftovers.

We succesfully used this product for treating the earthen access road to the landfill. The agent binds the dust particles so there is no lifting up of the dust after the vehicle passes.

General conclusion is that in practise this agent is in accordance with the properties and the effects specified in the declaration.
